PROJECT DESCRIPTION

Boiler Plant Renovation/ Upgrade

Design/build project consisting of structural additional to plant, field erection of an 80,000 #/hr. coal fired Keeler/Door-Oliver superheat steam boiler, installation of Detroit Spreader Stoker with rotating grates, economizer, mechanical cyclone and baghouse collectors, coal ash conveying systems, silos, pipe systems and new Westinghouse controls and instrumentation for all facilities.

Green Contracting Company, Inc. was the prime contractor for this project, responsible for both design and construction of this project.

All work was performed in accordance with Green Contracting Company's Quality Control Program and the ASME Code Section I and B31.1 with certification of all welding procedures and application of the ASME Code Symbol "A".

Since completing this project, Green Contracting Company has been retained by the facility owner to complete all of the yearly maintenance of this equipment.

This project was completed with 80% of the work being performed by Green Contracting Company's own forces.

Throughout the years, Green Contracting Company has maintained the operations of this facility.

Green Contracting's personnel:

Project Manager: Robert E. Dalton
Project Foreman: George Fell
